

ANIMAL MAN

The Senses: True or False?

If you think that the fascinating animal fact is TRUE, colour it in. If you think the animal fact is false, leave it without any colour.

Iguanas have fantastic eyesight. They can even see colours that humans cannot detect. This super sense is because they have a third eye on top of their heads.

Tarantulas have no senses of hearing or smell and they have very poor vision. The sense that they rely on most is touch.

Despite their big ears, rabbits have a poor sense of hearing.

Snakes do not smell the air. Instead, they prefer to taste it.

A rat's sense of smell is unbelievably sensitive. Using his nose, he can detect the smell of food from over a mile away.

I can identify and classify examples of living things, past and present, to help me appreciate their diversity. I can relate physical and behavioural characteristics to their survival or extinction. (SCN 2 - 01a).
